***RE: Big Rivers Electric Corporation's Coleman Station annual CCR fugitive dust control report
257.80 air criteria (7)(c)***

Per 40 CFR 257.80 an annual fugitive dust control report must be created in response to how the fugitive dust control plan was utilized over the previous year. The current plan went into effect on November 8, 2024. Since that time, no citizen complaints have been filed with Big Rivers Electric Corporation.

Big Rivers Electric Corporation's Kenneth C. Coleman Generating Station (Coleman Station) has been deactivated since 2014, and demolition activities of the generating station were completed in October 2025.

In order to control fugitive dust Big Rivers Electric Corporation has taken the following measures over the previous year:

- Exposed CCR or surface disturbances were minimized. Disturbances in or around the inactive surface impoundments were infrequent.
- Cover materials continue to be applied as needed, and vegetation was established in the footprint of the closed generating station demolition area.

No corrective measures are needed at this time.

Our Generating Stations & Office Locations: Headquarters • Energy Transmission & Substation • Sebree Station • Wilson Station
